

# **Search for Budget Combinations Tool**

### **Purpose:**

The Search for Budget Combinations Tool helps users find WUFAR combinations for budget items when filling out budgets for formula grants in WISEgrants.

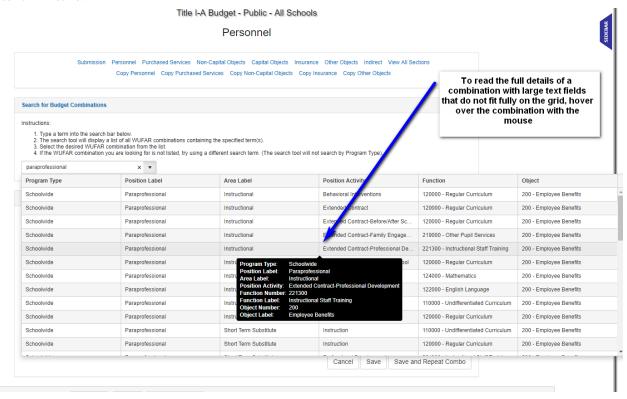

The tool can be accessed in all budget sections except "Indirect". Entering a keyword(s) into the tool will return a list of available combinations containing the selected word or phrase. The user may then select the desired combination and the details will populate in the budget panel below.

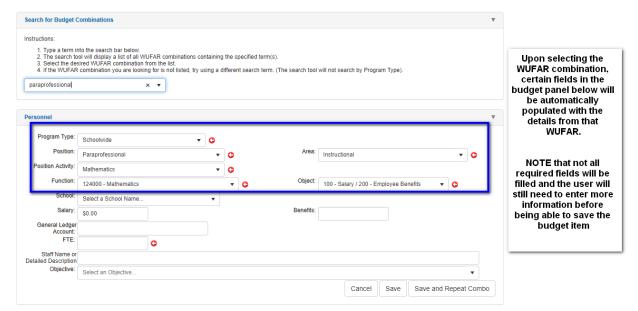

#### How to Use the Search for Budget Combinations Tool

- 1. Navigate to the grant and subsequent budget section where the budget item will be entered.
- 2. Choose a search term for the item you are trying to budget. See the <u>"Choosing the Optimal Search Term" section</u> for instructions to determine the optimal search term.
- 3. Enter the search term into the search bar labeled "Search for Budget Combinations".
- 4. A grid will appear containing a list of WUFAR combinations with matching terms.

5. Browse the grid for the desired WUFAR combination. Hover over a specific combination to see its full details.

6. Select and click on the desired combination. The details of the combination will automatically populate into the budget panel below.

#### **Choosing the Optimal Search Term**

The search tool generates a list of WUFAR combinations that contain the entered search term. Only use a search term from one field of the WUFAR combination you are looking for (i.e. only search by the Position Activity or Area Label, but not both).

The WUFAR fields that are searched depend on the budget section you are in:

- **Personnel**: Purchase Item, Purchase Item Detail, Position, Area, Function, and Object.
- **Purchased Services**: Purchase Item, Purchase Item Detail, Position, Area, Function, and Object.
- Non-Capital Objects, Capital Objects, Other Objects, and Insurance: Purchase Item, Purchase Item Detail, Function, and Object.

Example 1: The user is trying to budget for a paraprofessional to teach mathematics in the Personnel Section of their Title I-A budget. Appropriate search terms would be either "Paraprofessional" (Position Label) or "Mathematics" (Position Activity).

Example 2: The user is trying to budget for supplies that will be used in a training for school administrators, in their Title I- budget.

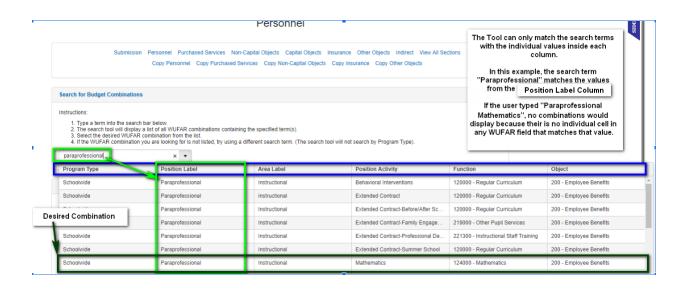

The user knows the budget item will be in the Non-Capital budget section, but does not know the specific WUFAR combination to use. Searching by the Purchase Item ("Supplies") will work; however, this will generate a lengthy list of potential combinations. A better idea would be to search by the Function ("264400" or "Non-instructional Staff Training"), as this will return a much shorter and more concise list to choose from.

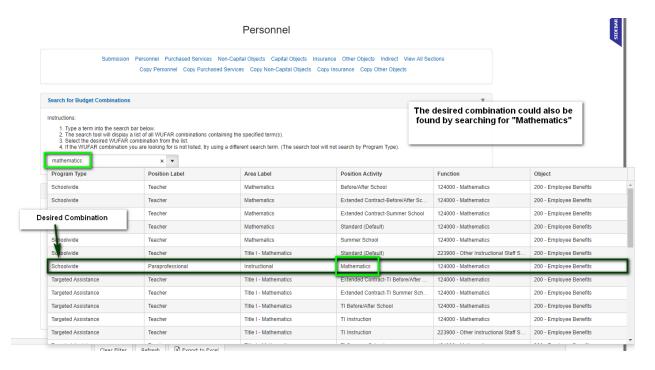

## **Troubleshooting**

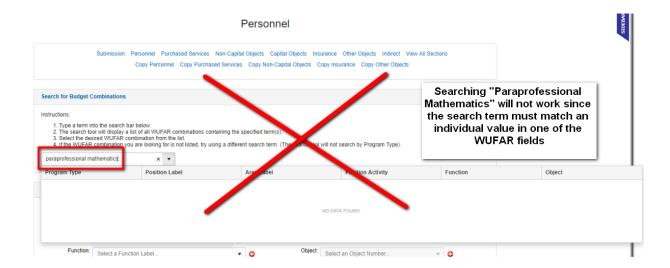

#### No Combinations Appear After Entering Search Terms

- Check that you are in the correct grant and budget section for the item you are trying to budget. The Search for Budget Combinations Tool will only search for WUFAR combinations from the specific grant and budget section you are in.
- 2. Simplify the search term(s) or try a new term.
  - IMPORTANT NOTE: Only use search terms for one field of the WUFAR combination you are looking for (i.e. only search by the Position Activity or Area Label, but not both).
  - *Example*: The user is trying to budget for a paraprofessional to teach mathematics in the Personnel Section of the Title I-A Budget.

Even if the user knows that the <u>Position Label</u> is "Paraprofessional" and the <u>Position Activity</u> is "Mathematics", they should not search "Paraprofessional Mathematics". The user should either search by the specific Position Label ("Paraprofessional") or the Position Activity ("Mathematics"), but not both.

#### WISEgrants Says The Selected Combination Is Not An Available Option:

Certain WUFAR combinations can only be selected if various conditions in the grant application are met. If the user attempts to select a WUFAR combination and the required conditions are not met, the following message will appear:

The selected WUFAR combination is not an available option under your current application. Certain combinations are only available if funds have been set-aside for specific activities within the application.

Please select a different combination or review the Title I-A application to ensure you are using an allowable WUFAR.

For example, an LEA with all Schoolwide schools accidently chooses a WUFAR with the "Targeted Assistance" program type. This WUFAR would not be allowed since there are no Targeted Assistance schools in the LEA.

In some cases, the WUFAR could be available if the agency makes the appropriate adjustments to their application. For Title I-A, an example would be selecting a WUFAR with the Program Type "Neglected and Delinquent". These WUFAR combinations are only available to agencies that have set aside funds under the "Neglected and Delinquent" Plan Reservation.

If the user accidentally selects a WUFAR under the "Neglected and Delinquent" Program Type, the tool will not let it be used if the agency has not reserved funds appropriately.

If the user does want to use a WUFAR under the "Neglected and Delinquent" Program Type, they must first set aside an amount under the Neglected and Delinquent Reservation on the **Plan Reservation** screen prior to entering the budget item.
